This range is factory set for use with Natural gas. See “Gas Conversions” section. The model/serial/rating plate located on the oven frame behind the top right-hand side of the oven door has information on the types of gas that can be used. If the types of gas listed do not include the type of gas available, check with the local gas supplier.

**LP gas conversion:**
Conversion must be done by a qualified service technician. No attempt shall be made to convert the appliance from the gas specified on the model/serial/rating plate for use with a different gas without consulting the serving gas supplier. See “Gas Conversions” section.

**Gas Supply Line**
- Provide a gas supply line if ¾” (1.9 cm) rigid pipe to the range location. A smaller pipe on longer runs may result in insufficient gas supply. With LP gas, piping or tubing size can be ½” (1.3 cm) minimum. Usually, LP gas suppliers determine the size and materials used in the system.
- If local codes permit, a new CSA design-certified, 4 to 5 ft (122 to 152.4 cm) long, ½” (1.3 cm) or ¾” (1.9 cm) I.D. (inside diameter), flexible metal appliance connector may be used for connecting range to the gas supply line.
- Must include a shutoff valve:
  - The supply line must be equipped with a manual shutoff valve. This valve should be located in the same room but external to the range opening, such as an adjacent cabinet. It should be in a location that allows ease of opening and closing. Do not block access to shutoff valve. The valve is for turning on or shutting off gas to the range.

**IMPORTANT:** Range must be level after installation. Follow the instructions in the “Level Range” section. Using the cooktop as a reference for leveling the range is not recommended.

* Range can be raised approximately 1” (2.5 cm) by adjusting the leveling legs.

**ELECTRICAL REQUIREMENTS**

This range is manufactured with the neutral terminal connected to the cabinet. Use a 3-wire UL listed, 40- or 50-amp power supply cord (pigtail). See the following Range Rating chart. If local codes do not permit ground through the neutral, use a 4-wire power supply cord rated at 250 volts, 40 or 50 amps and investigated for use with ranges.

*The NEC calculated load is less than the total connected load listed on the model/serial/rating plate.

**If connecting to a 50-amp circuit, use a 50-amp rated cord with kit. For 50-amp rated cord kits, use kits that specify use with a nominal 1½” (3.5 cm) diameter connection opening.

• A circuit breaker is recommended.
INSTALLATION CLEARANCES

Cabinet opening dimensions shown are for 25" (64.0 cm) countertop depth, 24" (61.0 cm) base cabinet depth and 36" (91.4 cm) countertop height.

IMPORTANT: If installing a range hood or microwave hood combination above the range, follow the range hood or microwave hood combination installation instructions for dimensional clearances above the cooktop surface.

Range may be installed next to combustible walls with zero clearance.

NOTE: When installed in a slide-in cutout, the front of oven door may protrude beyond the base cabinet.
