Do not remove ground prong.
Do not use an adapter.
Do not use an extension cord.
Failure to follow these instructions can result in death, fire or electrical shock.

Troubleshooting Problems

Please read the following before arranging for service.

1. The mixer may warm up during use. Under heavy loads with extended mixing time periods, you may not be able to comfortably touch the top of the unit. This is normal.
2. The mixer may emit a pungent odor, especially when new. This is common with electric motors.
3. If the flat beater hits the bowl, stop the mixer. See "Beater to Bowl Clearance," page 11.

If your mixer should malfunction or fail to operate, please check the following:

1. Is the mixer plugged in?
2. Is the fuse in the circuit to the mixer in working order? If you have a circuit breaker box, be sure the circuit is closed.
3. Turn mixer off for 10-15 seconds, then turn mixer back on.

If the problem cannot be corrected with the above steps, see the KitchenAid Warranty on page 3. **DO NOT** return the mixer to the retailer – they do not provide service.

Using Your KitchenAid® Attachments

Flat Beater for normal to heavy mixtures:

| | |
|-------------------|-----------------|
| cakes | biscuits |
| creamed frostings | quick breads |
| candies | meat loaf |
| cookies | mashed potatoes |
| pie pastry | |

Wire Whip for mixtures that need air incorporated:

| | |

| eggs | sponge cakes |
| egg whites | angel food cakes |
| heavy cream | mayonnaise |
| boiled frostings | some candies |

Dough Hook for mixing and kneading yeast doughs:

| | |
|-------|--------------|
| bread | coffee cakes |
| rolls | buns |

Mixing Time

Your KitchenAid® Mixer will mix faster and more thoroughly than most other electric mixers. Therefore, the mixing time in most recipes must be

adjusted to avoid overbeating. With cakes, for example, beating time may be half as long as with other mixers.

Mixer Use

NOTE: Do not scrape bowl while mixer is operating.

The bowl and beater are designed to provide thorough mixing without frequent scraping. Scraping the bowl once or twice during mixing is usually sufficient. Turn unit off before scraping.

The mixer may warm up during use. Under heavy loads with extended mixing time, you may not be able to comfortably touch the top of the unit. This is normal.

Care and Cleaning

! WARNING

Injury Hazard

Unplug mixer before inserting or removing beaters.
Unplug mixer before cleaning.
Failure to do so can result in broken bones or cuts.

Bowl, white flat beater and white dough hook may be washed in an automatic dishwasher. Or, clean them thoroughly in hot sudsy water and rinse completely before drying. Wire

whip, burnished dough hook and burnished flat beater should be hand washed and dried immediately. Do not wash wire whip, burnished dough hook and burnished flat beater in a dishwasher. Do not store beaters on shaft.

NOTE: Always be sure to unplug mixer before cleaning. Wipe mixer with a soft, damp cloth. Do not use household/commercial cleaners. Do not immerse in water. Wipe off beater shaft frequently, removing any residue that may accumulate.

Beater To Bowl Clearance

Your mixer is adjusted at the factory so that the flat beater just clears the bottom of the bowl. If for any reason, the flat beater hits the bottom of the bowl or is too far away from the bowl, clearance can be corrected as follows:

Tilt-Head models

- Unplug mixer.
- Lift motor head.
- Turn screw (A) SLIGHTLY counter clockwise (left) to raise flat beater or clockwise (right) to lower flat beater.
- Make adjustment with flat beater, so it just clears surface of bowl.

If you over adjust the screw, the bowl lock lever may not lock into place.

Bowl-Lift models

- Unplug mixer.
- Place bowl lift handle in down position.
- Turn screw (B) SLIGHTLY counter clockwise (left) to raise flat beater and clockwise (right) to lower flat beater.
- Make adjustments with flat beater, so it just clears surface of bowl.

NOTE: When properly adjusted, the flat beater will not strike on bottom or side of bowl. If beater or wire whip is adjusted too close so that it strikes bottom of bowl, coating may wear off beater or wires may wear through on wire whip.

Speed Control Guide – 10 Speed Mixers

Number of Speed

| Stir Speed | | |
|------------|-------------------------------|---|
| | STIR | For slow stirring, combining, mashing, starting all mixing procedures. Use to add flour and dry ingredients to batter, add liquids to dry ingredients, and combine heavy mixtures. |
| 2 | SLOW MIXING | For slow mixing, mashing, faster stirring. Use to mix heavy batters and candies, start mashing potatoes or other vegetables, cut shortening into flour, mix thin or splashy batters, and mix and knead yeast dough. Use with Can Opener attachment. |
| 4 | MIXING, BEATING | For mixing semi-heavy batters, such as cookies. Use to combine sugar and shortening and to add sugar to egg whites for meringues. Medium speed for cake mixes. Use with: Food Grinder, Rotor Slicer/Shredder, and Fruit/Vegetable Strainer. |
| 6 | BEATING, CREAMING | For medium fast beating (creaming) or whipping. Use to finish mixing cake, doughnut, and other batters. High speed for cake mixes. Use with Citrus Juicer attachment. |
| 8 | FAST BEATING, WHIPPING | For whipping cream, egg whites, and boiled frostings. |
| 10 | FAST WHIPPING | For whipping small amounts of cream or egg whites. Use with Pasta Maker and Grain Mill attachments. |

NOTE: Will not maintain fast speeds under heavy loads, such as when using Pasta Maker or Grain Mill attachments.

NOTE: The Speed Control Lever can be set between the speeds listed in the above chart to obtain speeds 3, 5, 7 and 9 if a finer adjustment is required. Do not exceed Speed 2 when preparing yeast doughs as this may cause damage to the mixer.

Mixing Tips

Converting Your Recipe for the Mixer

The mixing instructions for recipes in this book can guide you in converting your own favorite recipes for preparation with your KitchenAid® mixer. Look for recipes similar to yours and then adapt your recipes to use the procedures in the similar KitchenAid recipes.

For example, the “quick mix” method (sometimes referred to as the “dump” method) is ideal for simple cakes, such as the Quick Yellow Cake and Easy White Cake included in this book. This method calls for combining dry ingredients with most or all liquid ingredients in one step.

More elaborate cakes, such as Caramel Walnut Banana Torte, should be prepared using the traditional cake mixing method. With this method, sugar and the shortening, butter or margarine are thoroughly mixed (creamed) before other ingredients are added.

For all cakes, mixing times may change because your KitchenAid® mixer works more quickly than other mixers. In general, mixing a cake with the KitchenAid® mixer will take about half the time called for in most cake recipes.

To help determine the ideal mixing time, observe the batter or dough and mix only until it has the desired appearance described in your recipe, such as “smooth and creamy.”

To select the best mixing speeds, use the Speed Control Guide on page 12.

Adding Ingredients

Always add ingredients as close to side of bowl as possible, not directly into moving beater. The Pouring Shield can be used to simplify adding ingredients.

NOTE: If ingredients in very bottom of bowl are not thoroughly mixed, then the beater is not far enough into the bowl. See “Beater to Bowl Clearance,” page 11.

Cake Mixes

When preparing packaged cake mixes, use Speed 2 for low speed, Speed 4 for medium speed, and Speed 6 for high speed. For best results, mix for the time stated on the package directions.

Adding Nuts, Raisins or Candied Fruits

Follow individual recipes for guidelines on including these ingredients. In general, solid materials should be folded in the last few seconds of mixing on Stir Speed. The batter should be thick enough to prevent the fruit or nuts from sinking to the bottom of the pan during baking. Sticky fruits should be dusted with flour for better distribution in the batter.

Liquid Mixtures

Mixtures containing large amounts of liquid ingredients should be mixed at lower speeds to avoid splashing. Increase speed only after mixture has thickened.

Egg Whites

Place room temperature egg whites in clean, dry bowl. Attach bowl and wire whip. To avoid splashing, gradually turn to designated speed and whip to desired stage. See chart below.

| AMOUNT | SPEED |
|-------------------------------|-----------------|
| 1 egg white | GRADUALLY to 10 |
| 2-4 egg whites | GRADUALLY to 8 |
| 6 or more egg whites | GRADUALLY to 8 |

Whipping Stages

With your KitchenAid® mixer, egg whites whip quickly. So, watch carefully to avoid overwhipping. This list tells you what to expect.

Frothy

Large, uneven air bubbles.

Begins to Hold Shape

Air bubbles are fine and compact; product is white.

Soft Peak

Tips of peaks fall over when wire whip is removed.

Almost Stiff

Sharp peaks form when wire whip is removed, but whites are actually soft.

Stiff but not Dry

Sharp, stiff peaks form when wire whip is removed. Whites are uniform in color and glisten.

Stiff and Dry

Sharp, stiff peaks form when wire whip is removed. Whites are speckled and dull in appearance.

Whipped Cream

Pour cold whipping cream into chilled bowl. Attach bowl and wire whip. To avoid splashing, gradually turn to designated speed and whip to desired stage. See chart below.

| AMOUNT | SPEED |
|--------------|-----------------|
| ¼ cup | GRADUALLY to 10 |
| ½ cup | GRADUALLY to 10 |
| 1 cup | GRADUALLY to 8 |
| 1 pint | GRADUALLY to 8 |

Whipping Stages

Watch cream closely during whipping. Because your KitchenAid® mixer whips so quickly, there are just a few seconds between whipping stages. Look for these characteristics:

Begins to Thicken

Cream is thick and custard-like.

Holds Its Shape

Cream forms soft peaks when wire whip is removed. Can be folded into other ingredients when making desserts and sauces.

Stiff

Cream stands in stiff, sharp peaks when wire whip is removed. Use for topping on cakes or desserts, or filling for cream puffs.

Attachments and Accessories

General Information

KitchenAid® attachments are designed to assure long life. The attachment power shaft and hub socket are of a square design, to eliminate any possibility of slipping during the transmission of power to the attachment. The hub and shaft housing are tapered to assure a snug fit, even after prolonged use and wear. KitchenAid® attachments require no extra power unit to operate them; the power unit is built in.

General Instructions For Making And Kneading Yeast Dough with the Rapid Mix Method

"Rapid Mix" describes a bread baking method that calls for dry yeast to be mixed with other dry ingredients before liquid is added. In contrast, the traditional method is to dissolve yeast in warm water.

1. Place all dry ingredients including yeast into bowl, except last 1 to 2 cups flour.
2. Attach bowl and dough hook. Lock mixer head (tilt-head models) or raise mixer bowl (bowl-lift models). Turn to Speed 2 and mix about 15 seconds, or until ingredients are combined.
3. Continuing on Speed 2, gradually add liquid ingredients to flour mixture and mix 1 to 2 minutes longer. See Illustration A.

NOTE: If liquid ingredients are added too quickly, they will form a pool around the dough hook and slow down mixing process.

4. Continuing on Speed 2, gently add remaining flour, $\frac{1}{2}$ cup at a time. See Illustration B. Mix until dough clings to hook and cleans sides of bowl, about 2 minutes.
5. When dough clings to hook, knead on Speed 2 for 2 minutes, or until dough is smooth and elastic. See Illustration C.
6. Unlock and tilt back head (tilt-head models) or lower bowl (bowl-lift models) and remove dough from hook. Follow directions in recipe for rising, shaping and baking.

When using the traditional method to prepare a favorite recipe, dissolve yeast in warm water in warmed bowl. Add remaining liquids and dry ingredients, except last 1 to 2 cups flour. Turn to Speed 2 and mix about

ILLUSTRATION A

ILLUSTRATION B

ILLUSTRATION C

1 minute, or until ingredients are thoroughly mixed. Proceed with Steps 4 through 6.

Both methods work equally well for bread preparation. However, the "Rapid Mix" method may be a bit faster and easier for new bread bakers. It is slightly more temperature tolerant because the yeast is mixed with dry ingredients rather than with warm liquid.

Bread Making Tips

Making bread with a mixer is quite different from making bread by hand. Therefore, it will take some practice before you are completely comfortable with the new process. For your convenience, we offer these tips to help you become accustomed to bread making the KitchenAid way.

- Start out with an easy recipe, like Basic White Bread, page 47, until you are familiar with using the dough hook.
- ALWAYS use the dough hook to mix and knead yeast doughs.
- NEVER exceed Speed 2 when using the dough hook.
- NEVER use recipes calling for more than 8 cups all-purpose flour or 6 cups whole wheat flour when making dough with a 4½ quart mixer.
- NEVER use recipes calling for more than 10 cups all-purpose flour or 6 cups whole wheat flour when making dough with a 5 quart mixer.
- Use a candy or other kitchen thermometer to assure that liquids are at temperature specified in the recipe. Liquids at higher temperature can kill yeast, while liquids at lower temperatures will retard yeast growth.
- Warm all ingredients to room temperature to insure proper rising of dough. If yeast is to be dissolved in bowl, always warm bowl first by rinsing with warm water to prevent cooling of liquids.
- Allow bread to rise in a warm place, 80°F to 85°F, free from draft, unless otherwise specified in recipe.
- Here are some alternative rising methods to use: (1) The bowl containing the dough can be placed on a wire rack over a pan of hot water. (2) The bowl can be placed on the top rack of an unheated oven; put a pan of hot water on the rack below. (3) Turn the oven to 400°F for 1 minute; then turn it off; place the bowl on the center rack of the oven and close the door.

Cover bowl with waxed paper, if desired. Always cover with towel to retain warmth in the bowl and protect the dough from drafts.
- Recipe rising times may vary due to temperature and humidity in your kitchen. Dough has doubled in bulk when indentation remains after tips of fingers are pressed lightly and quickly into dough.
- Most bread recipes give a range for the amount of flour to be used. Enough flour has been added when the dough clings to the hook and cleans sides of bowl. If dough is sticky or humidity is high, slowly add more flour, about ½ cup at a time but NEVER exceed recommended flour capacity. Knead after each addition until flour is completely worked into dough. If too much flour is added, a dry loaf will result.
- Some types of dough, especially those made with whole grain flours, may not form a ball on the hook. However, as long as the hook comes in contact with the dough, kneading will be accomplished.

Bread Making Tips

- Some large recipes and soft doughs may occasionally climb over the collar of the hook. This usually indicates that the dough is sticky and more flour should be added. The sooner all the flour is added, the less likely the dough will climb the hook. For such recipes, try starting with all but the last cup of flour in the initial mixing process. Then add the remaining flour as quickly as possible.
- When done, yeast breads and rolls should be deep golden brown in color. Other tests for doneness of breads are: Bread pulls away from the sides of pan, and tapping on the top of the loaf produces a hollow sound. Turn loaves and rolls onto racks immediately after baking to prevent sogginess.

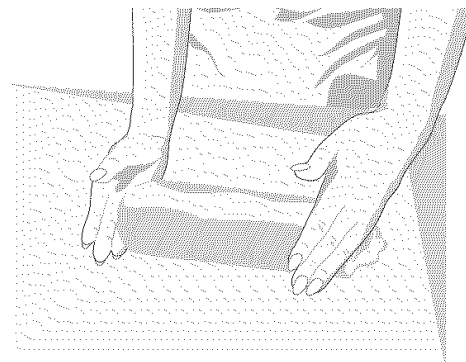

Shaping A Loaf

Divide dough in half. On lightly floured surface, roll each half into a rectangle, approximately 9x14 inches. A rolling pin will smooth dough and remove gas bubbles.

Starting at a short end, roll dough tightly. Pinch dough to seal seam.

Pinch ends and turn under. Place, seam side down, in loaf pan. Follow directions in recipe for rising and baking.

Basic White Bread

½ cup low-fat milk
3 tablespoons sugar
2 teaspoons salt
3 tablespoons butter
or margarine
2 packages active dry
yeast
1½ cups warm water
(105°F to 115°F)
5-6 cups all-purpose
flour

Place milk, sugar, salt, and butter in small saucepan. Heat over low heat until butter melts and sugar dissolves. Cool to lukewarm.

Dissolve yeast in warm water in warmed mixer bowl. Add lukewarm milk mixture and 4½ cups flour. Attach bowl and dough hook to mixer. Turn to Speed 2 and mix about 1 minute.

Continuing on Speed 2, add remaining flour, ½ cup at a time, and mix about 2 minutes, or until dough clings to hook and cleans sides of bowl. Knead on Speed 2 about 2 minutes longer, or until dough is smooth and elastic. Dough will be slightly sticky to the touch.

Place dough in greased bowl, turning to grease top. Cover. Let rise in warm place, free from draft, about 1 hour, or until doubled in bulk.

Punch dough down and divide in half. Shape each half into a loaf, as directed on page 46, and place in greased 8½x4½x2½-inch baking pans. Cover. Let rise in warm place, free from draft, about 1 hour, or until doubled in bulk.

Bake at 400°F for 30 minutes, or until golden brown. Remove from pans immediately and cool on wire racks.

Yield: 32 servings (16 slices per loaf).

Per serving: About 95 cal, 3 g pro, 18 g carb, 1 g fat, 0 mg chol, 148 mg sod.
